

Spreader Beams (Crane and Fork Mtd)

Our range of spreader beams consist of two main options, fork mounted and crane slung. Each beam is manufactured specifically to your requirements from S275 mild steel, and comes as standard with a swivel sling hook fitted on each end of suitable capacity.

Our spreader beams are the perfect attachment when handling long or wide loads that are un-palletised. Ideal for loading and un-loading lorry beds, or lifting machine tools for maintenance tasks, our range of spreader beams have a wide range of applications. Additional lifting points can be added upon request ensuring your beam is exactly suited to your requirements, with lifting chains or additional lifting accessories also available if required.
